## Description

**Visual perception** is the ability to interpret the surrounding environment using light in the [visible spectrum](#) reflected by the objects in the [environment](#). This is different from visual acuity which refers to how clearly a person sees (for example "20/20 vision"). A person can have problem with visual perceptual processing even if he/she has 20/20 vision.

The resulting [perception](#) is also known as visual perception, **eyesight**, **sight**, or **vision** ([adjectival form](#) : *visual, optical, or ocular*). The various physiological components involved in vision are referred to collectively as the [visual system](#), and are the focus of much research in [linguistics](#), [psychology](#), [cognitive science](#), [neuroscience](#), and [molecular biology](#), collectively referred to as [vision science](#).
