

University of Alaska Fairbanks WTC7 9/11 study

Description

"Of course the people don't want war. But after all, it's the leaders of the country who determine the policy, and it's always a simple matter to drag the people along whether it's a democracy, a fascist dictatorship, or a parliament, or a communist dictatorship. Voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked, and denounce the pacifists for lack of patriotism, and exposing the country to greater danger."

— Herman Goering at the Nuremberg trials

"As each day goes by, we learn that this government knew a whole lot more about these terrorists before September 11 than it has ever admitted."

~ Max Cleland, former U.S. Senator and 9/11 Commission Member

"It is our preliminary conclusions, based upon our work to date, that fire did not produce the failure at this particular building."

This graph from David Chandler's "Destruction of the World Trade Center North Tower and Fundamental Physics" (Journal of 9/11 Studies, February 2010) shows that the North Tower's upper section traveled at nearly uniform downward acceleration of -6.31 m/s² (with an R² value of 0.997), or 64% of free fall. [su_document url="http://ine.uaf.edu/media/222439/uaf_wtc7_draft_report_09-03-2019.pdf" height="740?"] [/su_spoiler] [su_youtube url="https://youtu.be/ydu9M_64IRU" width="400? height="200? responsive="no"] On September 11, 2001, at 5:20 PM, the 47-story World Trade Center Building 7 collapsed into its footprint, falling more than 100 feet at the rate of gravity for 2.5 seconds of its seven-second destruction.

The Architects & Engineers for 9/11 Truth are pleased to partner with the University of Alaska Fairbanks (UAF) in releasing the draft report of a four-year computer modeling study of WTC 7's collapse conducted by researchers in the university's Department of Civil and Environmental Engineering. The UAF WTC 7 report concludes that the collapse of WTC 7 on 9/11 was caused not by fire but rather by the near-simultaneous failure of every column in the building.
