## **Description**

**Psychology** is the <u>science</u> of <u>behavior</u> and <u>mind</u>, including <u>conscious</u> and <u>unconscious</u> phenomena, as well as <u>feeling</u> and <u>thought</u>. It is an <u>academic discipline</u> of immense scope and diverse interests that, when taken together, seek an understanding of the emergent properties of <u>brains</u>, and all the variety of <u>epiphenomena</u> they manifest. As a <u>social science</u> it aims to understand individuals and groups by establishing general principles and researching specific cases.[1][2]

In this field, a professional <u>practitioner</u> or researcher is called a <u>psychologist</u> and can be classified as a <u>social</u>, <u>behavioral</u>, or <u>cognitive scientist</u>. Psychologists attempt to understand the role of <u>mental</u> <u>functions</u> in individual and <u>social behavior</u>, while also exploring the <u>physiological</u> and <u>biological</u> processes that underlie cognitive functions and behaviors.
