

## Undisclosed metallic nanoparticles found in most regular vaccines

### Description

Two Italian researchers have found exotic nanoparticles are polluting almost all vaccine (the particles were not simply impurities). However, they were not disclosed by the manufacturers. The small size of these particles allow them to enter our cells and have a permanent effects. Mrs Gatti was about to testify in parliament enquiry on vaccine damages of Italian military courses but both researches have been raided by police and all their material has been taken away.

M Gatti, A. (2017). New Quality-Control Investigations on Vaccines: Micro- and Nanocontamination. *International Journal of Vaccines & Vaccination*, 4(1). [doi.org/10.15406/ijvv.2017.04.00072](https://doi.org/10.15406/ijvv.2017.04.00072)

*"The results of this new investigation show the presence of micro- and nanosized particulate matter composed of inorganic elements in vaccines' samples which is not declared among the components and whose unduly presence is, for the time being, inexplicable. A considerable part of those particulate contaminants have already been verified in other matrices and reported in literature as non biodegradable and non biocompatible."*

James Grundvig via the World Mercury Project describes what happened quite well:

*"Because Gatti and Montanari had taken their research of nanodust and nanoparticles, from in-vivo (performed in a living organism) and in-vitro (performed in a test tube) to what unseen contamination might reside in vaccines in 2016, they came under the microscope of the United States, European, and Italian authorities. They had touched the third rail of medicine. They had crossed the no-go zone with the purported crime being scientific research and discovery."*

*By finding nano-contamination in random vaccines, Gatti and Montanari revealed, for the first time, what no one knew: Vaccines had more than aluminum salts adjuvants, Polysorbate-80, and other inorganic chemicals in them, they also harbored stainless steel, tungsten, copper, and other metals and rare elements that don't belong in shots given to fetuses, pregnant women, newborns, babies and toddlers developing their lungs, immune and nervous systems."*
